

Thank you for purchasing Griffin AutoPilot.

AutoPilot not only lets you charge your iPod in your car while you listen — it also adds one-touch playback control. AutoPilot acts as a wired remote that lets you control playback functions while your iPod is stowed away safely out of sight.

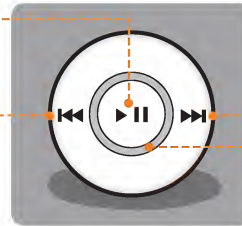

AutoPilot comes with a stereo audio cable for use with your car stereo's 1/8" (3.5mm) auxiliary input port, and a Hi/Lo signal switch. Choose the setting that produces the strongest signal and clearest sound with your stereo system.

- ▶ Plug AutoPilot into your car's cigarette lighter or 12V accessory socket, and plug the other end of AutoPilot's cable into the dock connector of your iPod.
- ▶ Plug the included stereo audio cable into AutoPilot's audio port, and the other end into the Aux In port of your stereo.
- ▶ To play your iPod through a car cassette deck, we recommend the Griffin DirectDeck™ cassette adapter (available separately).

Play/Pause

Press to skip to beginning of current track. Press again to skip back to previous track. Hold down to scan backward.

Press to skip forward to next track. Hold down to scan forward.

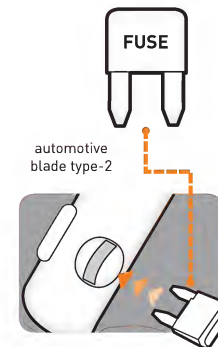

Light Ring
Glowes red when plugged in and ready to charge. Pulsates amber when charging and turns green when charging is complete.

Troubleshooting

Connected iPod is not charging, or there is no LED showing.

Check:

- AutoPilot fully plugged into lighter or power socket?
- Is dock connector firmly connected to your iPod?
- Has your car's lighter fuse blown? (Check your owners' manual for instructions on locating and replacing the fuse.)
- Has AutoPilot's fuse blown? Replace with a mini automotive fuse (sometimes called a mini ATM-type fuse) rated at 2 amps, available at most general retailers, electronics and auto parts suppliers. For best results, remove and take the blown fuse with you to ensure a match.

Technical Specifications

Input voltage range: 12 – 16 Volts DC
Maximum current: 2 Amp
Output voltage: 5.2 Volts DC at 500mA
Fuse type: 2 Amp blade-type mini-auto fuse
